

PROJECT	Commercial Building
DATE	February 2007
CUSTOMER	ISOLINE S.A. (LAMKO S.A.)
INDUSTRY	Commercial Buildings
LOCATION	Larissa, Larissa, Greece
PRODUCTS	PENETRON ADMIX®, PENEBAR® SW – 45 Rapid

CASE SUMMARY

City of Larissa is located in the central part of Greece.

The contractor of the commercial building, LAMKO S.A., had to decide between PVC membranes and PENETRON ADMIX® for waterproofing the basement slab and walls. After the careful examination of the two systems, LAMKO S.A. chose PENETRON ADMIX® due to its effectiveness, reliability and simple applications methods. On the same project they also used PENEBAR® SW – 45 Rapid in order to waterproof the cold joints between the basement slab and vertical concrete walls. The mixing ratio of the PENETRON ADMIX® that was used, was 1% by cement weight and the total slab area was around 2,400 yd² (2,000 m²).
